Research Experience

Woods Hole Oceanographic Institution — Sep 2021–Present

Graduate Research Assistant — *Woods Hole, MA*

- Tested causes of deep ocean cooling using global MITgcm simulations, supporting NASA efforts of global ocean modeling and data assimilation.
- Analyzed 40TB+ of high-resolution coupled climate model output to understand the connections between ocean circulation and dissolved chemicals in the ocean.
- Produced written reports, posters, and presentations to communicate findings to broader communities.
- Processed and analyzed 5TB+ of high-resolution ocean reanalysis data and found significant connections between near-shore sea surface temperature and extreme California precipitation events.
- Developed tools to analyze big climate data using Python and Julia.

Los Alamos National Laboratory — Jun 2021–Aug 2021

Summer Intern — *Los Alamos, NM*

- Implemented reduced-precision capabilities within the ocean component of the Energy Exascale Earth System Model.
- Found that reduced precision significantly reduced compute time but at cost of model skill.

Institute for Pure and Applied Mathematics — Jun 2020–Sep 2020

Summer Intern — *Los Angeles, CA*

- Designed and implemented reinforcement learning algorithms for adaptive packet routing in satellite network simulations.
- Empirical models were built in Python primarily using PyTorch and NetworkX.
