### Woods Hole Oceanographic Institution

*Graduate Research Assistant*

Sep 2021–Present

*Woods Hole, MA*

- Designed and ran global ocean simulations using MITgcm to test mechanisms controlling deep ocean circulation and heat content
- Evaluated high-resolution coupled climate models to quantify the impacts of Antarctic sea ice melt on deep water formation and interior tracer distributions
- Used ocean reanalysis and satellite products to establish a statistical relationship between remotely-generated near-shore sea surface temperature variability and extreme precipitation events in California
- Developed Python and Julia tools to process, visualize, and interpret terabytes of climate data in high-performance computing environments

### Foundation for Resilient Societies

*Technical Consultant*

Jan 2025

*Cambridge, MA*

- Ran and debugged Strategic Energy & Risk Valuation Model (SERVM) simulations to assess adequacy of U.S. electrical grid capacity under varying generation scenarios (e.g., solar adoption).
- Led a team of 12 undergraduate electric grid modeling interns to develop an internal user guide for running SERVM experiments and interpreting model output.
